Long-Range
Transmitter

Receiver / Control-Center

ANGEL-EYE Transmitter

The innovative technology transmits the video-signal wirelessly over several kilometer (max 5-10km) to the Receiver-Station or to a computer, so that you can evaluate the images or give an automatic alarm.

Angel-Eye has an integrated high-resolution cctv-camera, which can cover app. 360 degrees at day and night.

Distant object can be monitored very simply without any connection to Mobil-Grid or Internet.

As addition a decentralized internet access for outdoor.

ANGEL-EYE Transmitter

The **horizontal** alignment is made to reach the maximum to the reception-signal.

(Manual adjustment is absolutely necessary towards to the receiver.)

The **vertical** inclination of the antenna by approximately 8 degrees requires the maximum range of up to 10 km.

(No adjustment possible, since the upper part of the housing already contains this inclination)

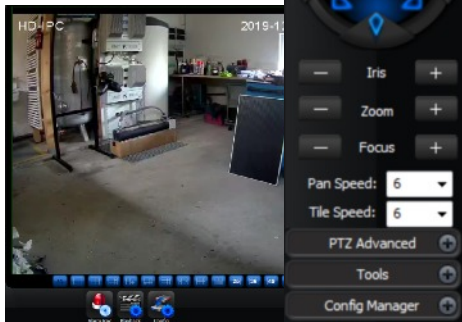

ANGEL-EYE Receiver

With our special Receiver-Software you can managed and controlled up to 64 ANGEL-EYE's at the same time.

The Receiver-Software can record videos and photos of every single ANGEL-EYE's and save it on your Computer (Option: Receiver-Station) for later analysis.

Each ANGEL-EYE can be zoomed and focused in all directions and each parameter can be saved as a preset.

Receiver / Control-Center

ANGEL-EYE Internet-Access

- Internet access directly at the ANGEL-EYE
- Plug and play (plug in and access is done)
- Transfer rate up to 300Mbit / sec
- Encrypted data transfer
- High speed transmission with 5G
- Connection Ip68 (waterproof)
